

Error Log Entry

What error message did you encounter (if any)?

What unexpected behavior did your program exhibit?

- 1 It would not run due to the error.

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

- 1 Syntax error.

Include a screenshot of specific lines of code.

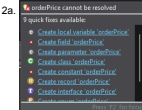

```
1 public static void calculatePrice(int numBurg, int numSal, int numFry, int numSoda)
```

How did you fix the issue?

- 1 I asked AI and it told me to make calculatePrice accept the Food objects it needed.

Provide the corrected code or solution using a screenshot.

```
1 public void calculatePrice(int numBurg, int numSal, int numFry, int numSoda, Food burger, Food salad, Food fries, Food soda)
```

- 2a. It would not run due to the error.

- 2a. Syntax error.

```
2ab. system.out.println("Your order comes to $" + orderPrice.getPrice());
```

- 2a. I asked AI and it told me to create a new food object for the order price.

```
2a. food orderPrice = new Food();
```

- 2b. There was no error message.

- 2b. The order price total always showed zero when the program was run.

- 2b. I asked AI and it told me to call on the calculation before printing the price.

```
2b. //calculate total  
orderPrice.calculatePrice(numBurg, numSal, numFry, numSoda, burger, salad, fries, soda);
```
